Jordan Example

Data Engineer | jordan.example@example.com | (555) 010-0142 | Tampa, FL

PROFESSIONAL SUMMARY

Data engineer with six years of experience building batch pipelines for insurance and retail analytics teams. Comfortable owning a pipeline from ingestion to the dashboards that depend on it.

EXPERIENCE

Senior Data Engineer, Example Mutual Insurance | Mar 2022 - Present

- Built PySpark jobs on Databricks that load claims and policy data into Snowflake, cutting the nightly batch window from 5 hours to 90 minutes.
- Designed a star schema for claims reporting used by the actuarial and finance teams, replacing 14 hand-maintained Excel extracts.
- Scheduled and monitored 40+ Airflow DAGs, adding SLA alerts that reduced missed morning loads from weekly to roughly once a quarter.
- Wrote Python data-quality checks that run before every load and block bad files from reaching reporting tables.
- Reviewed pull requests for two junior engineers and ran a monthly session on SQL performance tuning.

Data Engineer, Sample Retail Group | Jun 2019 - Feb 2022

- Developed ETL pipelines in Python and SQL on AWS (S3, Glue, Redshift) for store sales and inventory data.
- Migrated 120 stored procedures from SQL Server to Redshift and documented the data lineage for each.
- Built Tableau extracts and worked with analysts to define revenue and margin metrics.

SKILLS

Languages: Python, SQL, Scala
Data: PySpark, Databricks, Snowflake, Airflow, Redshift, Tableau
Cloud and tools: AWS, Git, CI/CD, Docker, Kubernetes

EDUCATION

B.S. Computer Science, Example State University | 2019
